

AMENDMENTS TO THE SPECIFICATION

On page 6 of the application, please amend the 3rd paragraph as follows:

Top post 2 is to be used as a bridge between a battery post and a battery terminal. Figure 1 shows how the upper piece 4 of the top post 2 is wedged between a battery terminal 42 of a battery 40 and a connecting battery post 44. If a battery would include two battery posts, then two top posts 2 would be used. Using top post 2 as a “bridge” between a battery post and a battery terminal will significantly cut down or prevent corrosion on the battery post and/or battery terminal by allowing the corrosion to instead accumulate on top post 2 rather than accumulate on a battery post and/or battery terminal, thereby extending the life of the battery and saving money and time for a consumer.
